A Message from the CCMS President

Jose Baez, M.D., Board President

As we move into the fall season, I want to take a moment to share some exciting updates and reflections from our Collier County Medical Society. It's been an active and inspiring time for our members, and I'm grateful for the continued engagement and dedication you bring to our mission of advancing medical excellence and community health.

residents and fellows, for a current total of over 780 members (with 600+ practicing members). Please take a moment to connect with new colleagues through our CCMSonline.org website where we list social events and member programs. And if you are interested in mentorships (as a mentee or mentor), please contact our office.

If you haven't yet renewed your membership for 2025, please do so soon to continue receiving full access to our CME opportunities, networking, and advocacy updates.

Society Highlights

- **Recent Events:** Our Foundation of CCMS Docs & Duffers Charity Golf tournament held on Sep. 27th at Bonita Bay Club Naples was a resounding success. With over 100 attendees, we were able to raise over \$27,000. Thank you to everyone who participated and helped make it possible.
- **Upcoming Programs:** Mark your calendars for the Physicians' Community Talent Show scheduled for Nov. 16th at Sudgen Theater. From musical performances to standup comedy, our members and colleagues will display their talents that extend far beyond the exam room.
- **Advocacy & Outreach:** CCMS continues to work closely with state legislators Rep. Yvette Benarroch, Rep. Lauren Melo, and Sen. President Kathleen Passidomo to discuss such issues as physician shortages, public health and vaccine recommendations, physician well-being, and access to care.

Spotlight on Artificial Intelligence

A new addition to our clinical armamentarium of AI tools is Open Evidence. It is a medical AI/evidence assistant tool oriented towards clinicians. Here are some of its growing uses and developments:

- Acts like a medical research/copilot for physicians: help with literature, guidelines, decision support, drafting documents, etc.
- Offers features such as uploading and analyzing text; documents (PDF, word, etc.) with HIPAA compliance for US Clinicians.
- "Visits" mode: real-time evidence integration during patient visits, drafting notes, surfacing up-to-date guidelines during documentation workflows.

Looking Ahead

In the months ahead, our focus will be on improving physician collaboration with our legislators. We will travel to Tallahassee this December to meet with our state officials to discuss public health initiatives, expand GME programs, and enhance digital engagement. I encourage you to share your ideas, volunteer for committees, and stay active in shaping our shared future.

Membership Engagement

We're thrilled to see our membership continue to grow, welcoming over 50 new members year-to-date plus the new

Thank you for your continued commitment to our profession and our patients. Together, we are stronger — and I'm honored to serve as your president.

CCMS NEW MEMBERS WELCOME RECEPTION

11.21.2025 6:30PM

Naples Grande Beach Resort

PROGRAM OVERVIEW:

New CCMS members will be recognized for participating in our local medical society. Enjoy heavy hors d'oeuvres, cocktails, and mingling with your new CCMS colleagues.

Complimentary for CCMS physician members and one guest each, as well as CCMS Circle of Friends vendors (two attendees per company).

Weather permitting, this is an outdoor event ~ Cocktail attire suggested.

Foundation of CCMS “Docs & Duffers” Raises Over \$27,000

Foundation of Collier County Medical Society

The Foundation of Collier County Medical Society recently hosted its 12th Annual “Docs and Duffers” charity golf tournament at Bonita Bay Club East in Naples. This fundraising event took place on September 27th and raised over \$27,000 in net proceeds. Foundation supporters, including 112 golfers, 20 sponsors, 36 prize donors, and 26 volunteers came together for an enjoyable day of golf, contests, a tournament raffle, and an awards luncheon ceremony.

“We are immensely grateful for the outpouring of support and outstanding generosity we receive year after year in our charity golf tournament,” says Dr. Rolando Rivera, Foundation board chair. “The energy and commitment of our golfers, supporters, and volunteers make it possible to raise vital funds for future medical professionals and strengthen our community’s healthcare.”

After breakfast and a few practice swings, the scramble-format tournament started at 9am. Golfers played on the Bonita Bay Club’s beautiful Sabal course with complimentary on-course beverages, exhibitor treats, and a variety of hole contests throughout the day. Congratulations to the tournament winners:

1st-place foursome sponsored by Slepceвич Financial Group: Dr. Stephen Friedman, Taylor Sarovich, Bill Slepceвич, Will Slepceвич

2nd-place foursome sponsored by US Bank: Andy Buschle, Jim Hamilton, Mike Metcalf, Pete Pisarri

Individual awards: Closest to the Pin, Men: Shawn Stuben; Longest Drive, Men: Rob Eilers; Closest to the Pin and Longest Drive, Women: Judiann Delan

Money raised from the event will provide scholarships to future medical professionals and funding for local healthcare programs in need. For example, the Foundation has provided over a quarter of a million dollars in scholarships over the past 12 years, including the Dr. William and Nancy Lascheid Memorial Scholarship for Medical Students and additional healthcare scholarships. Scholarship applications for 2026 will be available at ccmsfoundation.org in December 2025.

Golf tournament supporters included Ace Sponsor EisnerAmper, Hole-in-One Sponsor Porsche Naples, and Eagle Sponsor Advanced Urology Institute. A link to the full list of sponsors and supporters is online at ccmsfoundation.org/#golf and photos from the tournament are posted at fb.com/ccmsfoundation.

The Foundation’s 13th Annual Docs & Duffers will be held in the fall of 2026. More information will be available at ccmsfoundation.org.

Beyond Burnout: Elevating Physician Families on the National Stage

Lisa A. Muehlenbein, PhD, CCMS Alliance Immediate Past President

As Immediate Past President of the Collier County Medical Society Alliance, President-Elect for the Florida Medical Association Alliance, and Director of Programs for the American Medical Association Alliance, I've had the privilege of seeing firsthand how physician families across the country navigate both the rewards and relentless demands of life in medicine. That perspective

came full circle when I attended the American Conference on Physician Health (ACPH) in Boston, Massachusetts, held September 11–13, 2025.

Co-sponsored by the American Medical Association, Mayo Clinic, and Stanford Medicine, this biennial conference is one of the most significant gatherings devoted to advancing physician well-being. I first attended ACPH in 2023 as a PhD student, eager to learn from the leading voices in this field. This year, I returned not as a student but as a presenter—sharing the results of my dissertation, *Physician Burnout and the Marital Relationship: Spouse Perspective*.

My research explored how physician burnout extends beyond the individual to affect marital and family relationships. Through interviews with ten female spouses of male physicians, ten themes emerged: **sacrifice and loss, loneliness, solo parenting, anger, helplessness, feeling misunderstood, health challenges, self-care, pride in service, and relationship strain**. Spouses spoke candidly about long work hours, chronic stress, and emotional exhaustion. One shared, “You totally lose your sense of self,” while another said, “I have to keep all the balls in the air at all times, and if something falls, that’s my fault.” Yet amid these challenges, many expressed deep pride and purpose: “It’s a bittersweet life. You know how much he means to other people, and that makes it all worth it.”

The findings highlight what medical families already know but healthcare systems often overlook—when one of us burns out, the entire family feels the heat. Burnout is not confined to hospital walls; it affects homes, marriages, and communities.

In addition to presenting my individual research, I co-authored a second poster on behalf of the American Medical Association Alliance (AMAA): *Beyond Burnout: Exploring the Life Satisfaction of Physician Partners—Results of the AMA Alliance Physician Family Experience Survey*. This national study, developed by the AMAA Physician Family Experience writing committee—Kendra Harvey, Lori Boies, PhD, myself, Elias Ciudad, Sarah Grimmer, PhD,

and Katie Harris—with guidance from Tait Shanafelt, MD and Wayne Sotile, PhD, author of *The Medical Marriage*—replicated and expanded upon the foundational 2011 study conducted by Shanafelt and Sotile.

The 2023 survey included responses from 1,422 physician spouses and partners and revealed several sobering trends. Relationship satisfaction has significantly declined since 2011, with those reporting being “very fulfilled” dropping from 55% to just 24%. Nearly one-third of respondents felt unfulfilled in their relationships. When asked if they would choose to partner with a physician again, only 38% said “yes,” while 43% answered “maybe.”

The strongest predictor of relationship satisfaction was not specialty or call frequency—but time. Couples who spent more than two hours of awake, uninterrupted time together each day were the most likely to report fulfilling relationships. Conversely, burnout, long work hours, and emotional exhaustion were linked to diminished connection. These findings confirm what many in the physician family community have long known: time together isn’t a luxury—it’s a lifeline.

The presence of medical Alliances at ACPH underscored the vital role these organizations play in the broader wellness conversation. Leaders and members from local, state, and national Alliances—many of whom balance their own experiences as physician spouses—were there to represent and advocate for the family perspective. It was powerful to see the growing recognition that the well-being of physicians cannot be separated from the well-being of those who love and support them. As an ambassador for the Dr. Lorna Breen Heroes Foundation, it was also meaningful to connect our ongoing efforts with this national movement to safeguard the mental health of healthcare professionals and their families.

ACPH was more than an academic event—it was a powerful reminder that physician health and family well-being are inseparable. Through research, advocacy, and collaboration, Alliances are helping ensure that physician families are not bystanders in this conversation—they are essential partners in it.

As preparations begin for the next International Conference on Physician Health in London (September 2026), one thing is certain: when physician families are heard, the entire medical community benefits. The work of Alliances everywhere helps ensure that those who support physicians behind the scenes are finally recognized as vital to sustaining the well-being of the profession itself.

CCMS Releases 2025-2026 Complimentary Physician Directory

Collier County Medical Society

Collier County Medical Society is pleased to announce the release of its 2025-2026 Physician Member Directory, a trusted and comprehensive guide to premier healthcare in Southwest Florida. This complimentary resource for residents and visitors alike provides valuable information on the region's top physicians.

The CCMS Directory features more than 600 actively practicing physician members across nearly 60 medical specialties, ensuring easy access to a broad range of healthcare services. Each listing includes office locations, contact information, and areas of specialty. The guide is updated annually to incorporate current information on various local, state, and federal healthcare programs, as well as allied healthcare services.

Complimentary copies of the CCMS 2025-26 Physician Member Directory are now available at Collier County Libraries or by contacting CCMS at 239-435-7727 to arrange a pick-up at their Naples office.

For up-to-date listings of actively practicing physician members, visit the CCMS online directory at ccmsonline.org/find-a-doctor. To update your listing, please contact CCMS at info@ccmsonline.org or (239) 435-7727.

The CCMS Directory is made possible through the valued support of our advertising partners. Interested advertisers for the 2026-27 edition can visit ccmsonline.org/support for details or contact CCMS at info@ccmsonline.org or (239) 435-7727.

Physician Wellness Program

Helping You Take Care of You

How it Works

CCMS provides you up to 6 sessions per year at no charge with doctorate-level, clinical psychologists.

- View participating psychologists at ccmsonline.org/physician-wellness.
- Call the psychologists' **private appointment line, 239-208-3984** for an appointment and identify yourself as a CCMS member. Receive same-day responses during business hours or next-morning response after hours.
- See the psychologist within 72 hours to 1 week, possibly sooner for urgent needs, with evening and early morning hours potentially available.
- Use the sessions to help you overcome difficulties, tap into your natural resilience, answer questions, or simply talk.
- Participating physicians have no financial responsibility - the psychologists bill CCMS directly with de-identified data.

Featuring confidential, convenient, cost-free access to professional psychological services for CCMS members.

Robotic Spine Surgery: Emerging as the Standard of Care in the United States

Amanda Sacino, MD, Apex Brain & Spine

and surgeons are experiencing the transformative benefits of technology-driven spine surgery.

The Shift Toward Robotics in Spine Surgery

Spine surgery has historically been among the most technically demanding areas of medicine. The spine houses the spinal cord and nerves, which are critical to nearly every function of the human body. Even minor inaccuracies during surgery can lead to serious complications, such as nerve injury, chronic pain, or spinal instability. Traditional spine surgery often relies on the surgeon's visual cues, fluoroscopy, and tactile feedback to place screws, rods, and other implants.

Although these methods have been refined over decades, they carry limitations. Reliance on fluoroscopy, for example, increases radiation exposure for both patients and surgical teams. Human error and anatomical variability also create opportunities for implant misplacement, which can compromise surgical outcomes. Robotic assistance addresses these challenges by offering unparalleled accuracy, consistency, and safety.

How Robotic Spine Surgery Works

Robotic spine surgery combines advanced imaging, navigation, and robotic technology to assist surgeons in planning and executing procedures with extraordinary precision. Preoperative imaging is integrated into robotic systems to generate a 3D map of the patient's anatomy. Surgeons can then create a highly detailed surgical plan, including exact screw trajectories and implant positions.

During surgery, the robotic arm guides instruments along these preplanned pathways with submillimeter accuracy. Unlike autonomous machines, robotic systems do not replace the surgeon's expertise; rather, they enhance it. The surgeon remains in full control, but the robot ensures that every movement is aligned with the surgical plan. This synergy reduces variability and improves outcomes, especially in complex or minimally invasive procedures.

Patient Safety and Improved Outcomes

One of the most significant benefits of robotic spine surgery is improved patient safety. Studies have consistently shown that robotic-assisted procedures result in higher accuracy rates for screw placement compared to traditional techniques. Correct screw placement is critical for stabilizing the spine and avoiding injury to nearby nerves or blood vessels.

Robotics also enables smaller incisions and less disruption to muscle and soft tissues. Minimally invasive approaches are associated with reduced blood loss, shorter hospital stays, and faster recovery times. Patients often experience less postoperative pain and a quicker return to daily activities, making robotic surgery a compelling option for those seeking both safety and efficiency.

Expanding Accessibility and Adoption

Initially, robotic systems were limited to major academic medical centers due to their cost and complexity. However, as technology has advanced, these systems have become more accessible to community hospitals across the United States. The widespread adoption of platforms such as the Globus ExcelsiusGPS reflects the growing consensus that robotics represents the future of spine surgery.

While the upfront investment in robotic platforms is substantial, the long-term benefits—such as fewer complications, reduced revision surgeries, and shorter hospital stays—translate into significant cost savings. As data continues to demonstrate these advantages, payers and administrators are increasingly supporting the transition to robotics.

Robotics as the Standard of Care

Robotic spine surgery is moving from being an innovative option to becoming the expected standard of care in the United States. Just as robotic systems have become routine in other specialties such as general surgery, urology, and gynecology, spine surgery is undergoing a similar transformation. Surgeons are incorporating robotics into their daily practice not as an experimental tool, but as a reliable partner in delivering the highest quality care.

Professional societies and training programs are also prioritizing robotic education. Neurosurgery and orthopedic residency programs now include robotic training modules, ensuring that the next generation of spine surgeons will be proficient in this technology from the outset of their careers. This commitment to training reinforces the expectation that robotics will be central to spinal procedures moving forward.

Prostate Artery Embolization (PAE): A Minimally Invasive Solution for Benign Prostatic Hyperplasia

Shivank Bhatia, MD, FSIR, Florida Prostate Centers & Naples Prostate Center

Benign Prostatic Hyperplasia (BPH), or prostate enlargement, is among the most common conditions in men over 50—affecting nearly half this group and up to 80% by age 80. The associated lower urinary tract symptoms (LUTS)—frequency, urgency, nocturia, weak stream, and incomplete bladder emptying—can severely impact quality of life. Early recognition and

appropriate referral are essential to improving outcomes and preserving patient well-being.

What is PAE?

Prostate Artery Embolization (PAE) is a minimally invasive, image-guided procedure performed under conscious sedation. Inserting a microcatheter through a small puncture in the groin or wrist, the interventional radiologist selectively blocks arteries supplying the prostate with calibrated microspheres. This controlled reduction in blood flow causes the gland to shrink over time, relieving symptoms without surgery or general anesthesia.

Ideal Candidates and Pre-Procedure Evaluation

PAE is suitable for men with moderate to severe LUTS who wish to avoid surgery or preserve ejaculation and sexual function. Unlike many surgical options, it is effective for prostates of moderate to very large sizes (>80cc). Evaluation includes urologic exam, prostate imaging (MRI or ultrasound), PSA testing, and collaboration among the primary care physician, urologist, and interventional radiologist to ensure accurate diagnosis and tailored care.

Clinical Efficacy and Outcomes

Multiple studies, including a Cochrane review and our published series of over 1,000 patients, show that PAE provides durable symptom relief comparable to transurethral resection of the prostate (TURP), with over 84% of patients maintaining improvement for 3-5 years. Importantly, PAE preserves sexual function and minimizes risks of retrograde ejaculation and erectile dysfunction associated with traditional surgery.

Safety and Recovery

PAE's safety profile is excellent. Minor side effects, such as temporary urinary discomfort or mild bladder spasms, usually resolve within days. Major complications are rare (<1%), and most patients are discharged same day and resume normal activities quickly.

Why Physicians Should Consider PAE

Primary care physicians play a key role in identifying BPH symptoms and guiding men toward minimally invasive, evidence-based treatments. PAE offers:

- No incisions or general anesthesia
- Lower complication risk
- Outpatient convenience
- Preservation of sexual function
- Long-term symptom improvement

With over 2,000 procedures performed, our team partners closely with referring physicians to provide safe, effective, patient-centered care for men living with BPH.

Shivank Bhatia, MD FSIR, is a board-certified interventional radiologist and founder of Florida Prostate Centers. He served as Chairman and Professor of Interventional Radiology at Univ. of Miami Health System 2019 - March 2025. Naples Prostate Center is affiliated with Vascular Center of Naples.

Continued from page 10

Robotic Spine Surgery

Looking Ahead: The Future of Robotic Spine Surgery

The future of robotic spine surgery is bright, with ongoing advancements poised to further expand its capabilities. Integration with artificial intelligence may allow robots to adapt surgical plans in real-time, providing even greater personalization and safety. Augmented reality and improved imaging systems will likely enhance the surgeon's visualization, while robotic systems themselves will continue to become more compact, efficient, and cost-effective.

Most importantly, patients are increasingly aware of the benefits of robotic-assisted surgery and are seeking out centers that offer this technology. As awareness grows, demand will only accelerate, further cementing robotics as the preferred—and eventually expected—approach to spine surgery in the United States.

Dr. Sacino is a neurosurgeon and managing partner at Apex Brain & Spine. She completed her neurosurgical training at Johns Hopkins Hospital as well as two spine fellowships. She trained under the inventor of the Globus ExcelsiusGPS robot. She was present during the first robotic surgery at Johns Hopkins Hospital and trained extensively with the robot for both brain and spine surgeries. She is in the top 1% internationally for number of robotic cases completed. She has also written research papers and given lectures on robotics for Neurosurgery. Apex Brain & Spine has started the Physicians Regional Robotic Spine Neurosurgery program

Physicians' Community Talent Show

Sunday, November 16, 2025
Sugden Community Theater – Naples, FL

■ **Performance:** 5:00-7:00 PM

■ **Reception & Art Exhibit:** 3:30 PM

Join us for an unforgettable evening as local physicians showcase their talents in music, dance, comedy, and more. This family-friendly event celebrates creativity, wellness, and community spirit.

■ **Benefiting:**

- Cancer Alliance Network: Supporting cancer patients and families throughout Southwest Florida
- Foundation of Collier County Medical Society: Providing scholarships and supporting physician wellness programs

■ Tickets available starting September 1, 2025:

Call the Sugden Box Office: 239-263-7990 or visit my.naplesplayers.org/5088

■ For information on ways to support this event, call 239-643-4673

Celebrate talent. Support wellness. Strengthen community.
